

# **FOOD PRODUCT SAFETY AND QUALITY CONTROL: SOME ILLEGAL TRICKS OF LOCAL PRODUCERS!**

**SORA YASRI<sup>\*</sup>, VIROJ WIWANITKIT<sup>\*\*</sup>**

## **ABSTRACT**

Food is the necessary substance for everyone. The production of food is very important and has to be controlled. The poor quality of food product is not uncommon and becomes the present public health countries. In developing countries such as those countries in Indochina, the poor quality of food product is common. Here, the authors present and discuss on some interesting case of poor quality of food product seen in Indochina.

**KEYWORD:** Food Product, Quality, Control.

## **INTRODUCTION**

Food is the necessary substance for everyone. The production of food is very important and has to be controlled. The poor quality of food product is not uncommon and becomes the present public health countries. In developing countries such as those countries in Indochina, the poor quality of food product is common. Here, the authors present and discuss on some interesting case of poor quality of food product seen in Indochina.

## **CASE STUDY**

### **REBORN OF THE OLD EXPIRED FOOD PRODUCT**

This is an interesting issue. The case is seen at a local desert shop. The investigation revealed that the local food producers bring the old expired coconut pudding from the old package and reinsert it into the new package and change the new expiration date notification.

## **BORN BEFORE LABELED PRODUCTION DATE**

This is another interesting case. The case is observed at a local market in a rural province in Indochina. The investigation found that the package of fermented fish products have the production notification on the day after the date of food investigation.

## **DISCUSSION**

To guarantee for food safety is an important aim in public health [1-2]. Several food borne diseases are documented in medicine and the prevalence of those diseases is very high in developing countries. In Indochina, as a developing region of the world, the poor quality of food products is not an uncommon problem [2].

In this short article, the authors present and discuss many interesting issue reflecting the poor control of production. The tricks of bad food producers are described and this becomes the legal issue to be controlled [3].

The tricks regarding production date and expiration date notification at the package can be easily used by bad illegal food producers and this is not an uncommon practice. It is no doubt that the food borne diarrhea is very common in Indochina.

The surveillance of food product safety is highly recommended and must be routinely done. Nevertheless, it is no doubt that it cannot cover all food products. To promote the responsibility mind of the food produces should be the benchmarking for this area. The local government has to strict implement of legal control and assure the quality of the local food producers.
